

WRITE A TEST SUITE TO TEST GOOGLE WITH TEST CASES USING SELENIUM IDE.

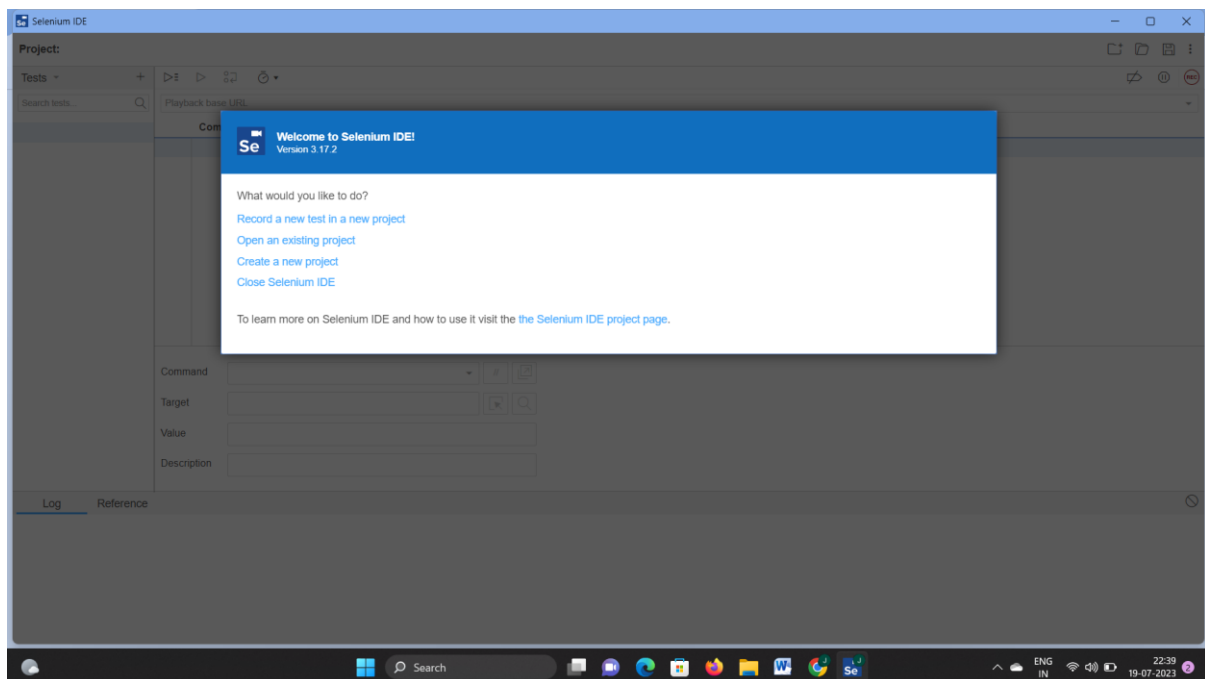

Aim:

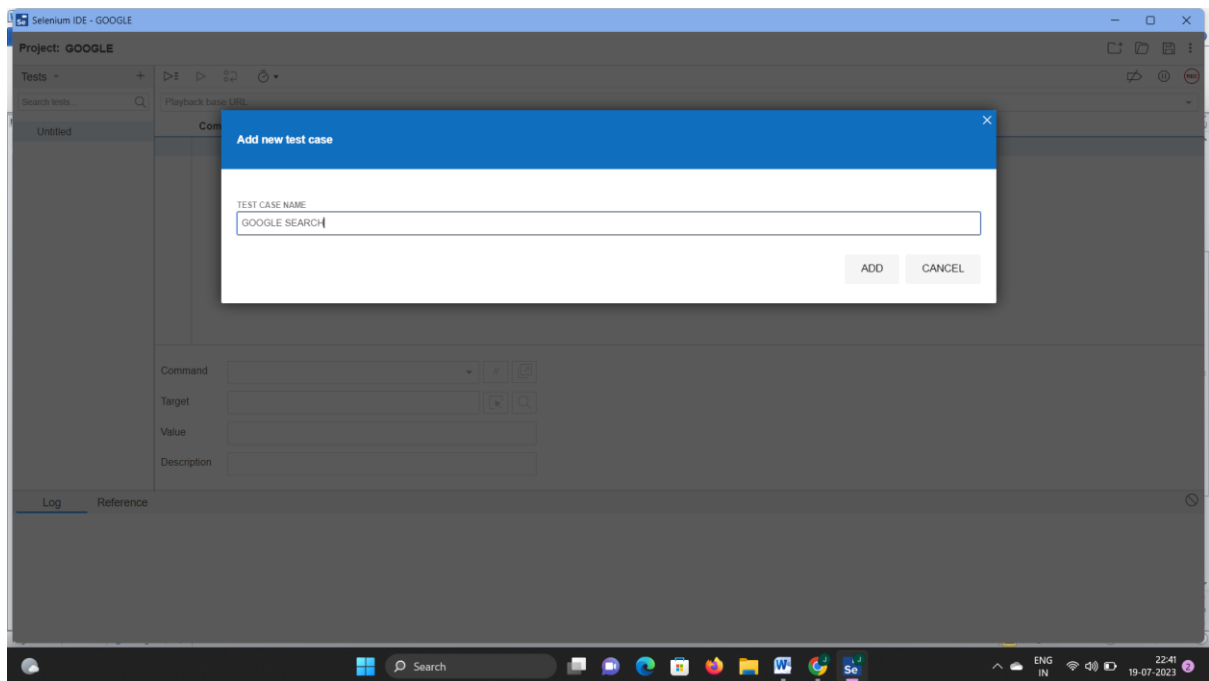

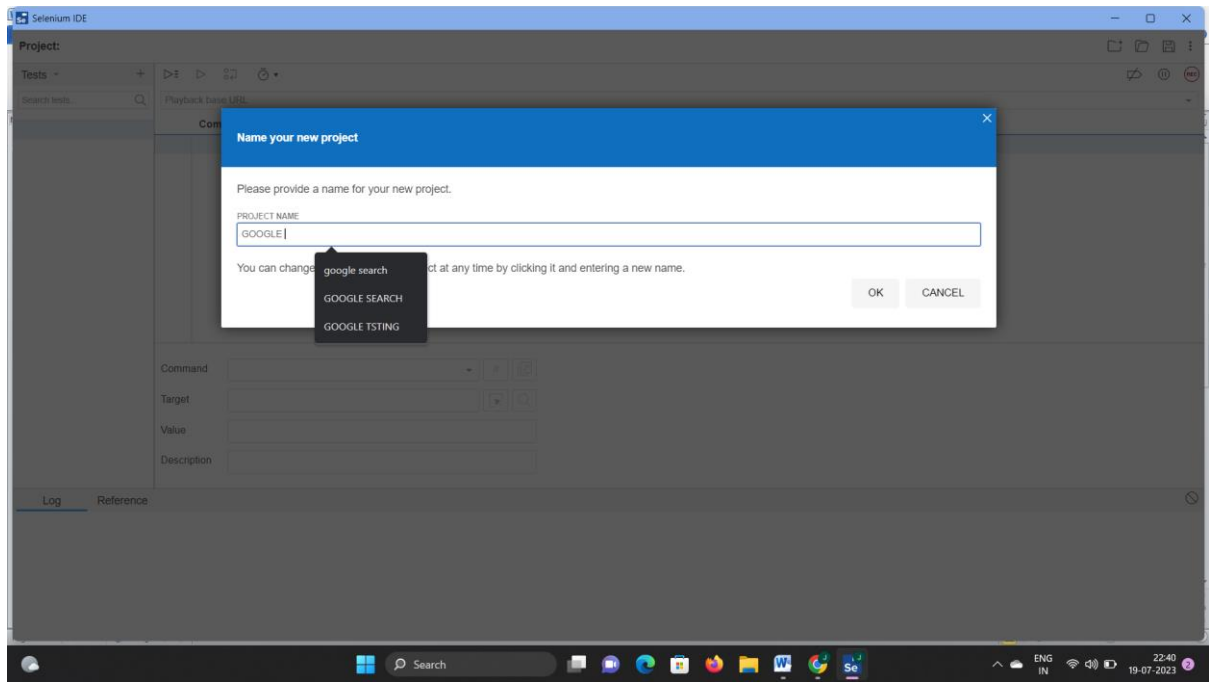

To test Google using Selenium IDE.

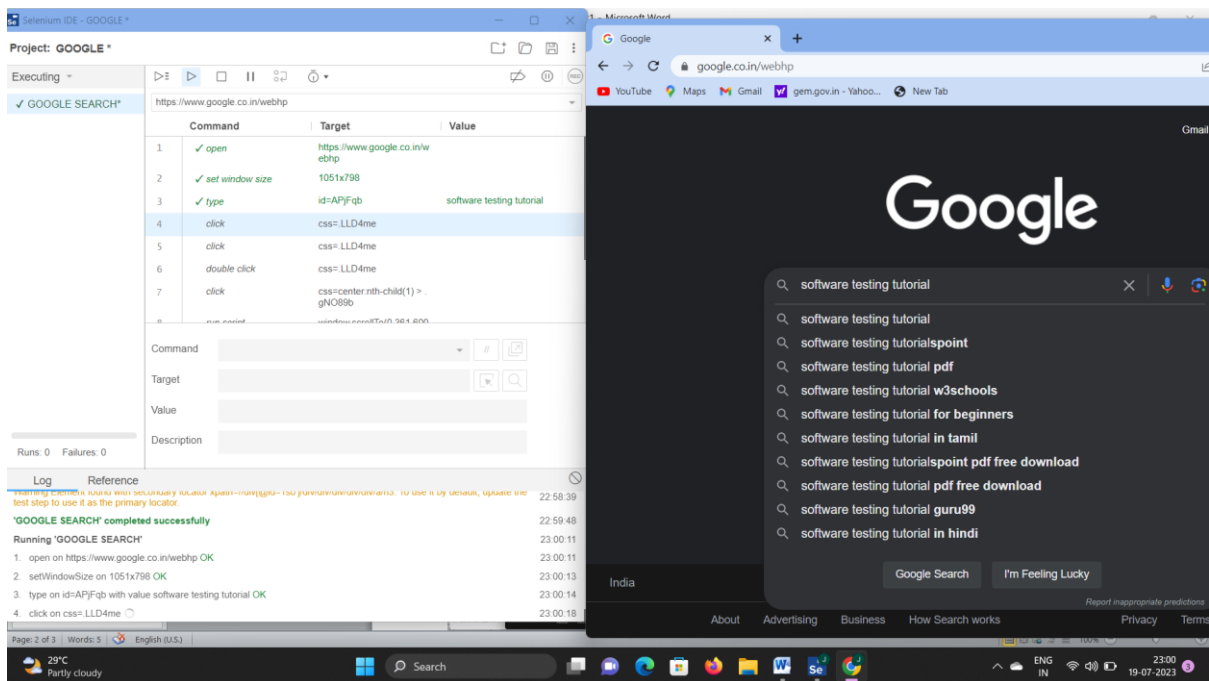

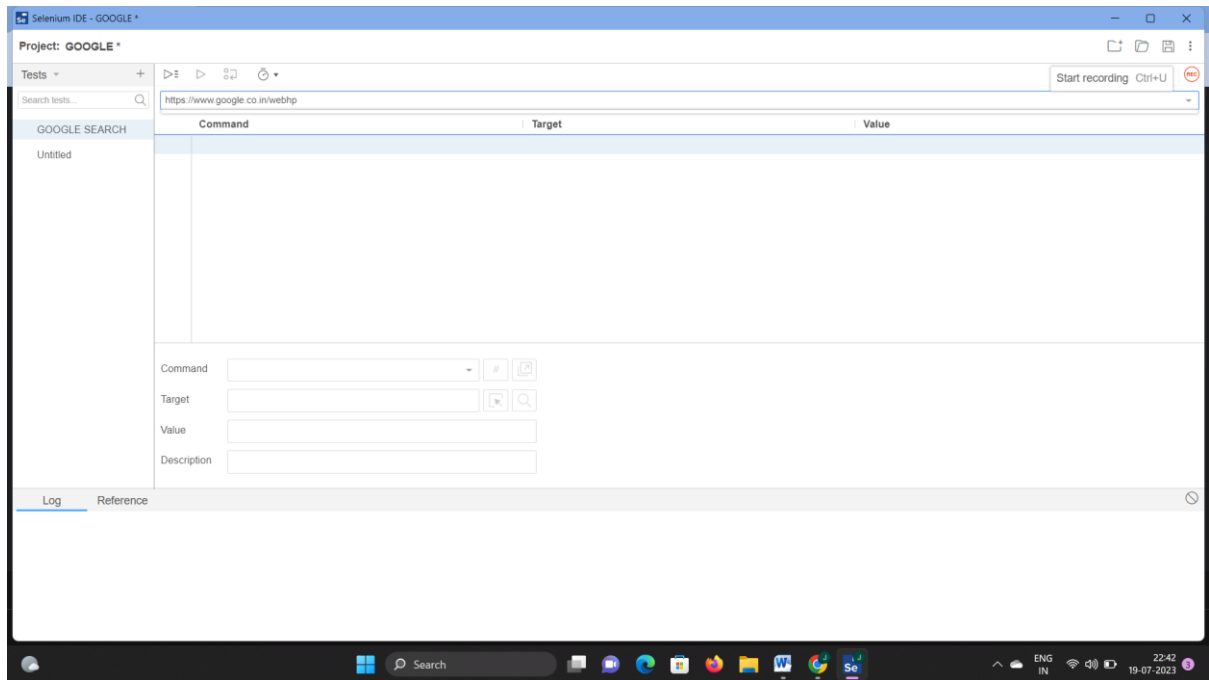

Procedure:

1. Open Selenium IDE in Google chrome Extension.
2. Create a new project and give project name . Add new test and give testcase name.
3. Copy the google URL and paste it in the playback base URL.
4. Start record and the Google search window will be displayed.
5. Search anything in it and go back to selenium IDE and stop the record .
6. Run the record and the process is displayed in the command, target and value.
7. Right click the test case and give export and choose the programming language.

Output:

Selenium IDE - GOOGLE *

Project: GOOGLE *

23:02:18

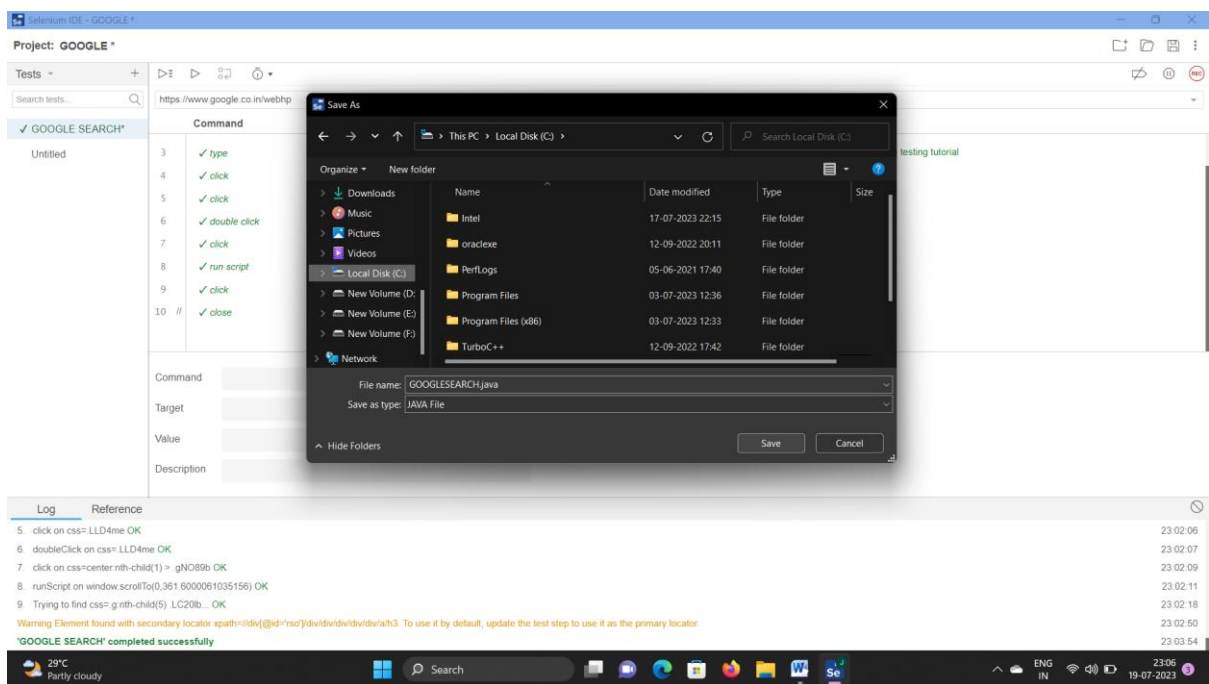

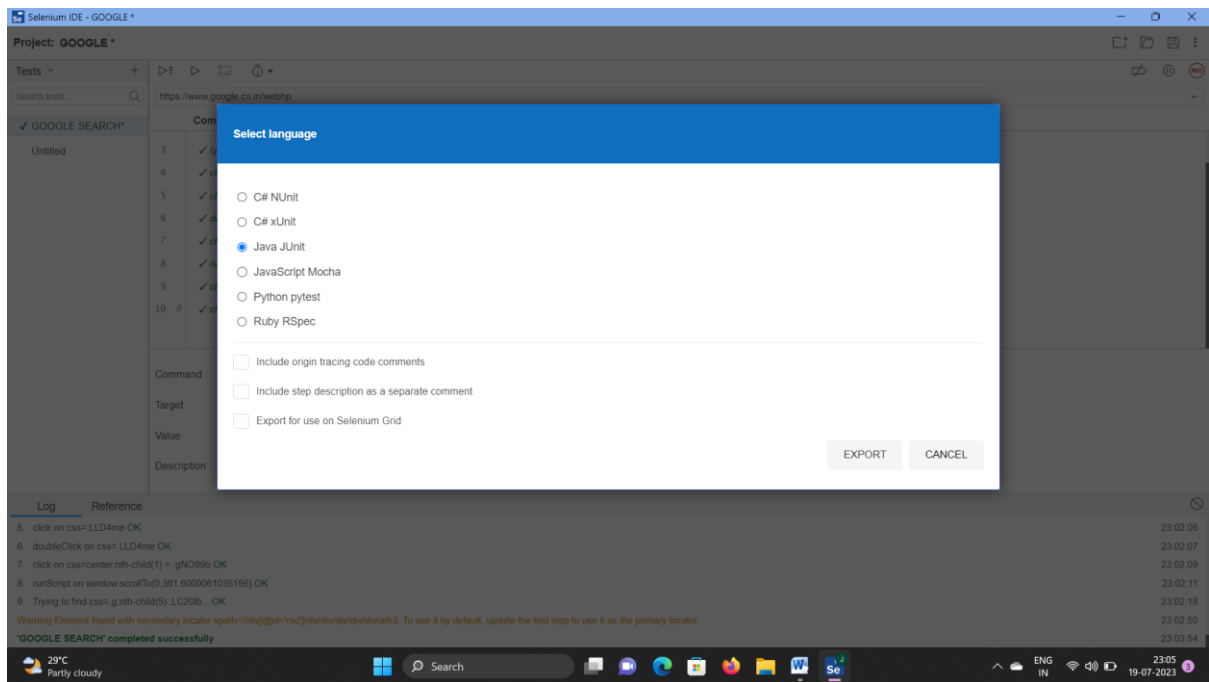

Warning Element found with secondary locator xpath=//div[@id='rsc']/div/div/div/div/div/a/h3. To use it by default, update the test step to use it as the primary locator.

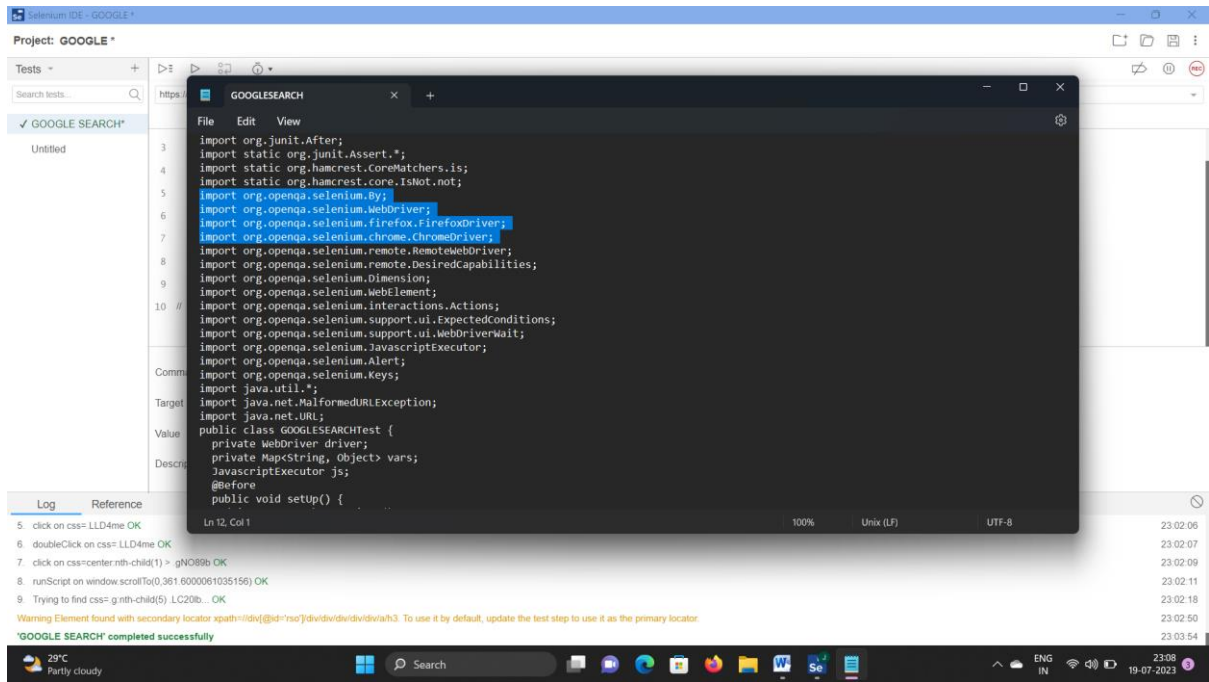

23:02:50

'GOOGLE SEARCH' completed successfully

23:03:54

4

RESULT:

Thus Selenium IDE has been executed successfully with the test cases.

	WRITE A SCRIPT TO LAUNCH CHROME BROWSER AND OPEN WEB SITE USING CHROME BROWSER.
--	--

CODE:

```
package googledemo;

import org.openqa.selenium.WebDriver;
import org.openqa.selenium.chrome.ChromeDriver;

public class CHROME_BROWSER {

    public static void main(String[] args) {

        // LAUNCH BROWSER
        System.setProperty("webdriver.chrome.driver", "D:\\SUBA\\DRIVERS\\
        chromedriver-win32\\chromedriver-win32\\chromedriver.exe");

        WebDriver driver=new ChromeDriver();

        // to open URL
        System.out.println("Browser Opened");
        driver.get("http://www.javatpoint.com/");

        // to Maximize the window
        driver.manage().window().maximize();

        // to get the title of the web page
        System.out.println("Page title is : " + driver.getTitle());

        //Close Browser
        driver.close();
        System.out.println("Browser Closed");

    }

}
```

OUTPUT:

```
<terminated> CHROME_BROWSER [Java Application] C:\Users\RAD-198\p2\pool\plugins\org.eclipse.justj.openjdk.hotspot.jre.full.win32.x86_64_17.0.3.v20220515-1416\jre\bin\javaw.exe (07-Sep-2023, 6:53:16 PM)

RESULT:

The program is executed successfully and thus the expected output is obtained.

WRITE A SCRIPT TO LAUNCH FIREFOX BROWSER AND OPEN WEB SITE USING FIREFOX BROWSER.
--

CODE:

```
package googledemo;

import org.openqa.selenium.WebDriver;
import org.openqa.selenium.firefox.FirefoxDriver;

public class firefoxdriver {

    public static void main(String[] args) {

        // Launch Web Browser

        System.setProperty("webdriver.gecko.driver", "D:\\SUBA\\DRIVERS\\
geckodriver-v0.33.0-win32\\geckodriver.exe");
        WebDriver driver= new FirefoxDriver();

        // to open URL

        System.out.println("Browser Opened");
        driver.get("http://www.javatpoint.com/");

    }
}
```

OUTPUT:**RESULT:**

The program is executed successfully and thus the expected output is obtained.

WRITE A SCRIPT TO TEST THE WEBPAGE AND DISPLAY RESULT USING JAVASCRIPT CODE.

CODE:

```
package googledemo;

import org.openqa.selenium.JavascriptExecutor;
import org.openqa.selenium.WebDriver;
import org.openqa.selenium.chrome.ChromeDriver;

public class script {

    public static void main(String[] args) {

        // To Launch Browser
        System.setProperty("webdriver.chrome.driver","D:\\SUBA\\DRIVERS\\chromedriver-win32\\chromedriver-win32\\chromedriver.exe");

        WebDriver driver=new ChromeDriver();

        // to maximize the window
        driver.manage().window().maximize();

        // open url
        driver.get("https://www.javatpoint.com/");

        // Javascript Code to display message

        JavascriptExecutor js = (JavascriptExecutor) driver;
        js.executeScript("window.scrollTo(0,4550)");
        js.executeScript("alert('Welcome to Javatpoint');");

        // to close Browser
        driver.close();
    }
}
```

OUTPUT:

RESULT:

The program is executed successfully and thus the expected output is obtained.

	WRITE A PROGRAM TO PERFORM ARITHMETIC OPERATIONS USING JUNIT
--	---

CODE: [Java Program]

```
package testingprograms;
```

```
public class Junitarithmetic
{
    public static int add(int number1, int number2)
    {
        return number1 + number2;
    }

    public static int sub(int number1, int number2)
    {
        return number1 - number2;
    }

    public static int mul(int number1, int number2)
    {
        return number1 * number2;
    }
}
```

CODE: [JUNIT Program]

```
package testingprograms;
```

```
import static org.junit.Assert.assertEquals;
import static org.junit.jupiter.api.Assertions.*;
```

```
import org.junit.jupiter.api.Test;
```

```
class JunitarithmeticTest {
    Junitarithmetic a=new Junitarithmetic();
```

```
@Test
```

```
void testadd()
{
    assertEquals("error", 15, a.add(10,5));
    assertEquals("error", 25, a.add(10,15));
    assertEquals("error", 11, a.add(10,1));
}
```

```
@Test
void testsub()
{
    assertEquals("error", 8, a.sub(10,2));
    assertEquals("error", 10, a.sub(15,5));
    assertEquals("error", 11, a.sub(15,4));
}
```

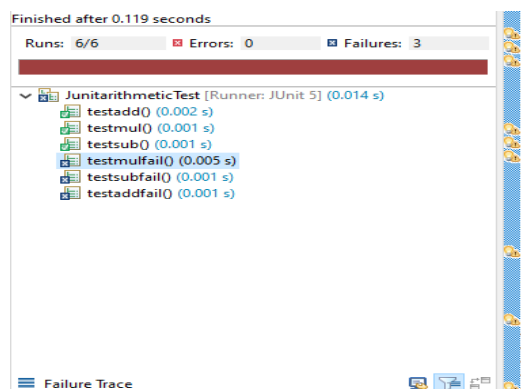

```
@Test

{
    assertEquals("error", 20, a.mul(10,2));
    assertEquals("error", 25, a.mul(5,5));
    assertEquals("error", 60, a.mul(15,4));
}
```

```
@Test
void testaddfail()
{
    assertEquals("error", 17, a.add(10,5));
}
```

```
@Test
void testsubfail()
{
    assertEquals("error", 18, a.sub(10,2));
}
```

```
@Test
void testmulfail()
{
    assertEquals("error", 30, a.mul(10,2));
}
}
```

OUTPUT:

RESULT:

The program is executed successfully and thus the expected output is obtained.

	WRITE A PROGRAM TO FIND BIGGEST AMONG THREE NUMBERS USING JUNIT
--	--

CODE [Java Program]

```
package testingprograms;

public class junitbig {
    public static int big (int a,int b,int c)
    {
        if ((a>b) && (a>c))
            return a;
        else if (b>c)
            return b;
        else
            return c;
    }
}
```

JUNIT Program

```
package testingprograms;

import static org.junit.Assert.assertEquals;
import static org.junit.jupiter.api.Assertions.*;

import org.junit.jupiter.api.Test;

class junitbigTest {

    junitbig c=new junitbig();

    @Test
    public void testbig() {
        //fail("Not yet implemented");
        assertEquals("error in biggest", 20, c.big (20,10,5));
        assertEquals("error in biggest", 50, c.big (20,50,10));
        assertEquals("error in biggest", 80, c.big (10,20,80));
    }

    @Test
    public void testbigfail() {
        assertEquals("error in biggest", 50, c.big (10,50,60));
        assertEquals("error in biggest", 5, c.big (50,10,5));
    }
}
```

```

    }
    assertEquals("error in biggest", 40, c.big(10,50,40));
}

```

OUTPUT

RESULT:

The program is executed successfully and thus the expected output is obtained.
